This report consists of two volumes concerning the Criteria and Methods (C&M) Program. Volume I is a summary report which discusses how the Program began, its objectives and goals, the structure and conduct of the program, and its accomplishments. Volume II is a user's guide for the Program archives. (Continued)

BLOCK 19 (Con't)

In addition to explaining how to locate a document in the files, the guide provides a complete listing of the contents of the file.

The Criteria and Methods Program was initiated in FY 74 to package the existing and evolving knowledge of ocean facilities engineering into manuals and handbooks to be used by ocean facilities engineers. The Program was to compare, evaluate, and document standard engineering criteria and methods based upon existing practices in specific support of the Naval Facilities Engineering Command's (NAVFAC) mission to design, construct and maintain fixed ocean facilities. The goal was to minimize unnecessary variance and overdesign, therefore maximizing reliability, safety and economy in meeting ocean engineering and construction requirements.

1.1 General - This User's Guide provides information on how to locate a document in the C/M Program Archives. Appendices A through E are listings of what is contained in each file. The C/M Program Archives are divided into two major categories - Administrative and Technical. The documents (products) received under work orders/contracts are annotated by a number indicating the fiscal year in which received, a number which indicates the sequence in which it was received during the fiscal year and a number which indicates it is a subdivision of a broad topic. For example:

Phase 1a Reports begin with the number FY 74-1. The first reports received were concerning construction and are annotated with FY 74-1. The first report in the construction category was on Anchor Systems and is annotated by FY 74-1.1 indicating it is a subdivision of the broad topic - Construction. The supplementary report received on Anchor Systems is annotated with FY 74-1.1S.

1.2 Administrative Files - The Administrative Files are set up by fiscal year beginning with FY 73 and ending with FY 77. Each fiscal year file is further subdivided into three categories - Correspondence; Program Management/Planning and Support; and Fiscal/Budget. Immediately following these files are files concerning any contracts awarded or project orders/work requests issued to Government Agencies during the particular fiscal year. The contract file is subdivided into Contract Award/Scope of Work; Schedule of Deliverables/Payments; Correspondence/Monthly Reports;

and Deliverables. All documents are filed in reverse chronological order. Appendices A through D contain listings of the contents of the Administrative Files.

1.2.1 Correspondence File - These files contain a separate folder for each participant in the C/M Program; i.e., PC-2, FPO-1, CEL, NUC, NUSC, and NSRDC. Within these folders are letters/memos of a non-technical nature such as transmittal letters, invitations to meetings/briefings and general correspondence.

1.2.2 Program Management/Planning Files - These files are also subdivided into folders for each participant. The files contain letters/memos concerned with management of the program such as program briefings, development plan, management plan, laboratory proposals, status reports and work unit summaries.

1.2.3 Fiscal/Budget File - This file contains financial information such as OSD budget submissions, budget requirements, budget justification, O&MN apportionments, transfer of funds, and project orders. Each C/M participant has a separate folder.

1.2.4 Contract/Work Request Files - These files are segregated by the fiscal year in which the contract or work request was awarded. In the Contract/Work Request Award/Scope of Work folder is located a copy of the contract/work request and all amendments including a statement of the

scope of work. The next folder contains the schedule of deliverables and any information concerning payments. General correspondence concerning the contract/work request and monthly status reports are in the next folder. Finally, either a reproducible master or a copy of the deliverables are filed in order of receipt. A duplicate copy of the deliverables is filed in the Product File under the name of the organization who produced the work.

1.3 Product/Cross Index File - Appendix E contains a cross index file which lists all products received by three different methods. The first listing is by Corporate Author. The second listing is by title of product arranged alphabetically, and the third listing is by discipline.
